

About Me

Cybersecurity and Network Engineering graduate from Alexandria University with a solid understanding of network security, system administration, cloud computing, and secure infrastructure design. Through academic and personal projects, I have gained practical experience in network traffic analysis, Zero Trust Architecture, machine learning-based threat detection, and SIEM monitoring. My technical skills include Python, Linux, Docker, and network troubleshooting. I enjoy working on technical challenges, learning new technologies, and finding practical ways to improve network security and system reliability.

Education

Alexandria University	2022 - 2026
Faculty of Computing and Data Science – Cybersecurity CGPA: 3.76	
Egyptian American School	Graduated 2022
Alexandria, Egypt – American Diploma CGPA: 4	

Certifications

- CompTIA A+
- Cisco Certified Network Associate (CCNA)

Projects

Zero Trust Architecture Simulation	2025
Network Security Machine Learning Cybersecurity • Designed a virtualised enterprise network with isolated subnets routed through a central Gateway, enforcing department-level VLAN segmentation and Zero Trust policies. • Integrated ML-based real-time traffic classification, Keycloak OIDC/OAuth2 identity management, Suricata IDS, and Splunk SIEM for end-to-end threat detection and monitoring.	
Dockerized Application with Database	2024
Cloud Computing • A web application using Docker that includes a web server container and a database container.	
Networked Client-Server Expression Evaluator	2023
Systems Programming TCP/IP Socket Programming • Built a client-server app over TCP/IP sockets where clients send arithmetic expressions across the network and the server computes and returns the result in real time.	
Hospital System	2022
Systems Programming • A scalable Java program to manage a hospital system using a database and user interface (JavaFX).	

Skills

- Python
 - Java
- Cybersecurity
 - Network Analysis
- Cloud
 - Docker
- Linux
 - Splunk
